6	11212	3x3 plate											

Once the cube is built, you can add whatever you want to the outside studs to make various designs. One possible layout for a set of dice is shown above. Another popular creations could be a Rubix Cube, with each side being all one color using different colors for each side.

While STEP 4 is optional, the 1x3 beams make the cube sturdier. This is helpful for dice or other models that may be subjected to rough usage, such as rolling dice.

Cubes of different sizes can be built using this same technique with different size plates. Just remember to use the 1x1 corner anchors at the corners (larger plates can have additional 1x1 anchors as needed).
